Dry Camping & Off-Grid Use Policy

Please Read Before Your RV Trip

Dry camping, boondocking, or off-grid camping means using the RV **without full campground hookups**, such as electric, water, and sewer connections.

Our RVs are designed for travel and camping, but they have **limited onboard water, battery power, propane, generator capacity, grey tank capacity, and black tank capacity**. These systems must be monitored and managed by the renter during the trip.

For the Best Experience

We strongly recommend booking an established RV campground or RV park whenever possible, especially if you are new to RV travel.

Full-service campgrounds such as **KOA, Good Sam parks, and other RV parks** may offer:

Electric hookup
Fresh water hookup
Sewer hookup or dump station
Bathrooms and showers
Easier overnight parking
Staff assistance

Campgrounds with hookups usually provide a smoother and more comfortable RV experience.

If You Choose to Dry Camp

If you choose to dry camp or camp off-grid, you are responsible for planning ahead and properly managing the RV systems.

This includes monitoring:

Fresh water level
Grey tank level
Black tank level
Battery level
Propane level
Fuel level
Generator use
Toilet use

Dump station planning
Water refill planning
Campground or overnight parking plans

Important RV System Limitations

The RV does **not** have unlimited water, power, sewer capacity, or battery life.

If you are not connected to campground hookups, it is normal to experience:

Fresh water running low
Grey or black tanks filling up
Battery power getting low
Needing to run the generator
Needing to refill propane or fuel
Needing to locate a dump station
Limited shower, toilet, and sink use

These are normal limitations of dry camping and are **not considered mechanical failures**.

Toilet & Tank Responsibility

RV toilets and tanks are more sensitive than home plumbing.

Only **RV-safe toilet paper** may be flushed.

Do not flush:

Wipes
Paper towels
Feminine products
Food
Trash
Excessive toilet paper
Any non-RV-safe items

If the toilet becomes clogged, backs up, overflows, smells, or the black tank becomes blocked due to improper use, overuse, or failure to dump the tanks, the renter may be responsible for cleaning, unclogging, labor, odor removal, repairs, or damage charges.

Water Pump & Leak Prevention

When dry camping, turn the water pump **OFF** when you are not actively using water.

If you notice a leak, water backup, toilet issue, unusual smell, or tank problem, stop using that system immediately and contact us.

Leaving the water pump on while unattended may cause additional water damage.

No Refunds for Dry Camping Limitations

Alaska RV Rentals is not responsible for inconvenience caused by choosing to dry camp or camp without hookups.

This includes running out of water, full tanks, low battery, generator use, needing to dump tanks, needing to refill propane/fuel, campground limitations, or lack of off-grid facilities.

By choosing to dry camp, the renter accepts responsibility for planning, monitoring, and properly using the RV systems.

Need Help?

Please message us with photos or a short video whenever possible so we can troubleshoot faster.
